CLIMATE

Mapping the Information Terrain

Mapping the Players 4

Mapping the Narrative
Field of Skepticism 10

Mapping Climate Media 51

Appendix 64

MAPPING THE PLAYERS

- 3 social network maps of about 13,000 Twitter accounts each: climate change, advocates and skeptics
- Influence based on in-network followership

KEY FINDINGS

ADVOCATES

- Largely institutional, within prominent long-established organizations, focused on climate change and/or traditionally associated topics
- Global scope
- Organic interest-diverse interconnections
- Dominant conversation: policy
- In the mainstream

SKEPTICS

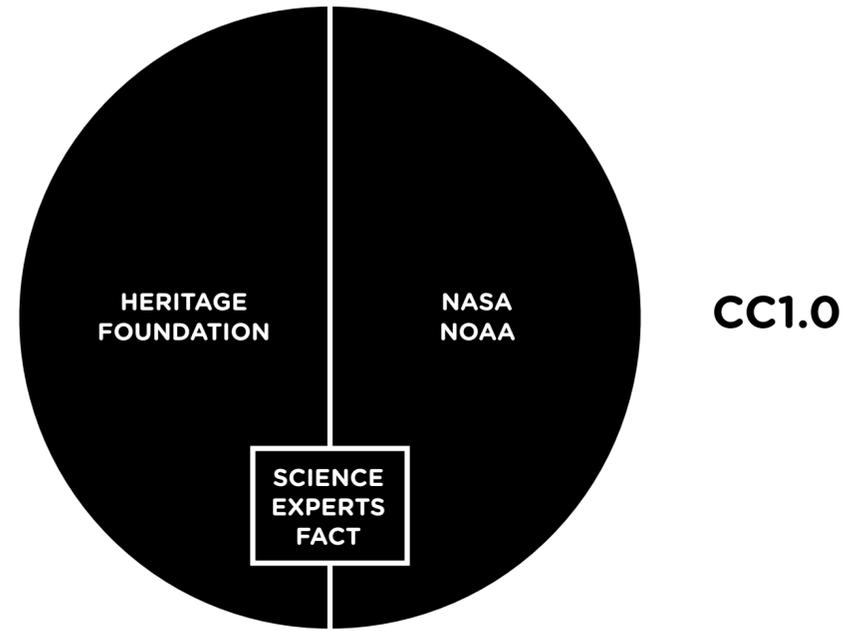

- Individuals, think tanks and media orgs focused on American conservative issues
- Very few focused exclusively on climate change or traditionally associated topics
- National scope
- Many orgs new to advocacy and media
- Densely interconnected
- Dominant conversation: politics
- At the margins . . . until recently

In the middle: no man's land, a little media, some skeptics

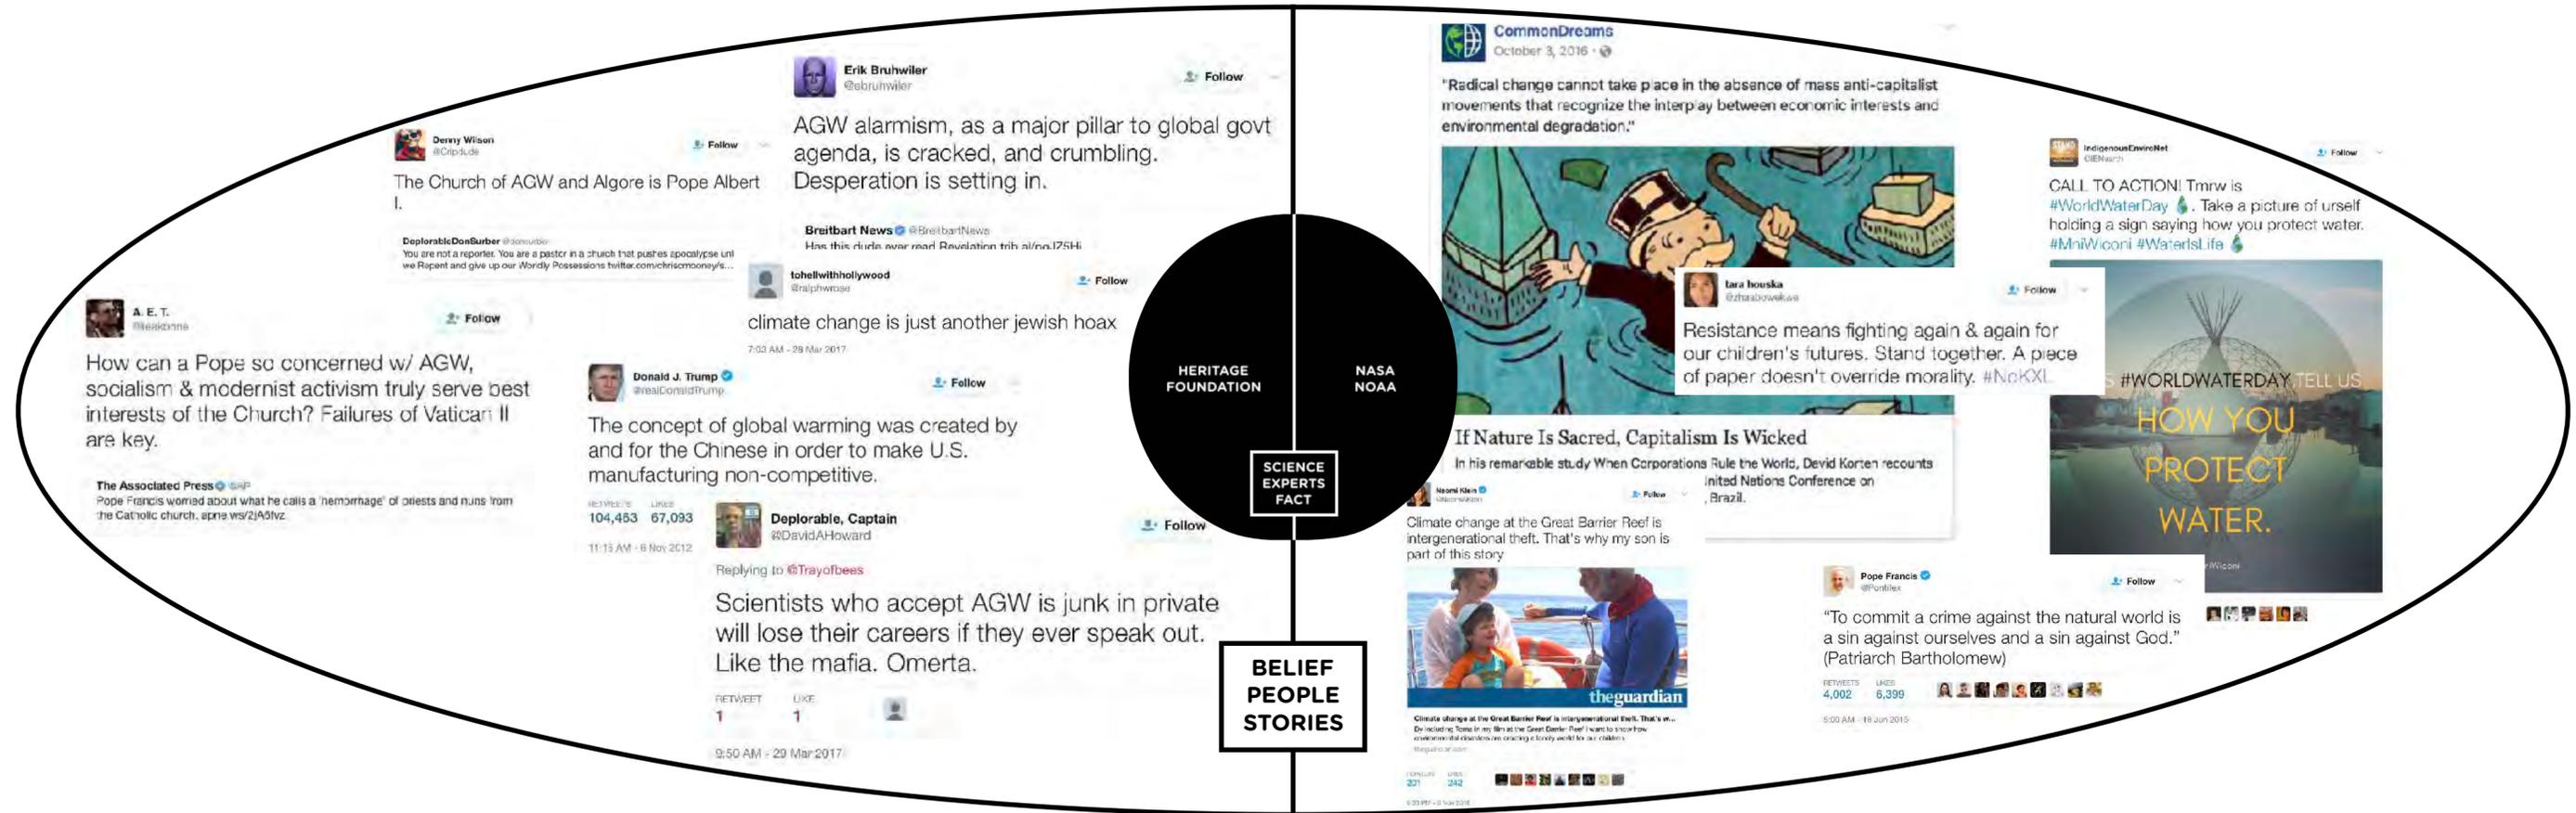

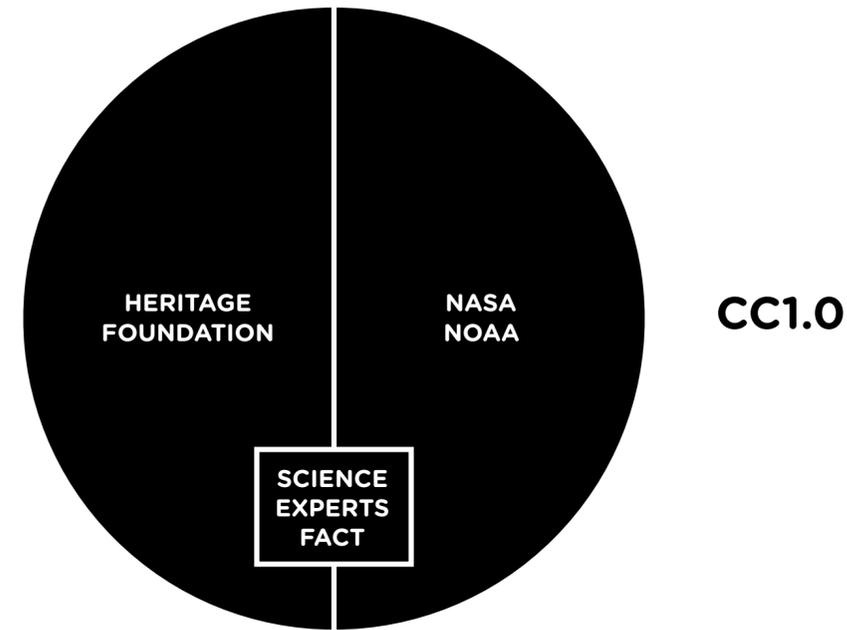

KEY INSIGHT

For skeptics, climate skepticism is not (or not mainly) about climate change.

IN THE BEGINNING:
DOUBT, THEN DEBATE

Don't let the facts stand in the way of a good fearporn story!
permalink embed parent

"Fear porn" or "Fear mongering" is not only done by the Mainstream Media but also Mainstream Conspiracy Theorists. Both of which never allow you to see Reality. Both of which control narratives so that you are unable to see Reality and therefore will not be able to Deconstruct Reality and understand Reality so that you can understand the spiritual presence vibrating inside of you at all times. Once you tap into the Spiritual presence within -fear, anxiety, and anger -which is attached to identity and Ego disappear. Do not fall for Mainstream Frauds. Seek the truth for yourself.

That's what we're dealing with now, a generation raised in a state of fear. The irrational behavior, the fervent name calling. It's going to take decades for this behavior to end and only after fear isn't taught in schools.

1. THE CULT, THE CHURCH, THE RELIGION

Federal Appeals Court Considers Whether to Allow Global Warming Cultists to Take over the Power Grid

Cavallo Ancient Briton - a month ago

Global warming is a religious doomsday cult. It is amusing to watch the Catholics become pagan marxist druids, or maybe it's more disappointing. They blame everything now on global warming, from autism to hurricanes, to earthquakes. Then claim if we just give over our standards of living, and ways of life to be managed by a centralized command and control structure, they'll keep the climate from changing. It's wackadoodle Jim Jones nonsense backed by junk political science.

This is science culture now. Skepticism is threatened and unconditional acceptance is praised (Limgur.com)

[-] VibratingBilbo 1 point 13 days ago

The path to 'climate morality' isn't even about attaining carbon neutrality; one's goodness is determined instead by how vigorously they proselytise.

In the name of the Leo, the Gore, and the Holy Hockey Stick, Amen.

About Us

Climate Change Dispatch (CCD) is a science and environmental news site showing its visitors the facts behind the theory of global warming, which are not being told by the mainstream media and the global-warming zealots. As noted below, we do not believe in consensus science. Beliefs belong in church, in prayers, but not in the scientific method.

Why do so many intellectuals take pleasure in predicting catastrophes? As regards scientists the reason is clear: he or she who predicts a catastrophe, will receive funds to study how to avoid such a disaster. According to the IEA (International Energy Agency) we will spend 2.3 trillion euro in the next 25 years to reduce the global temperature by less than 0.02 degrees Celsius.

Moreover, there are important industrial interests involved in investments that are supposed to combat global warming. But I suspect that these two causes, although true, do not offer the whole explanation. Two thousand years of Christianity has deeply implanted a sense of guilt and repentance in the psyche of Western man. We are guilty, so we deserve the disasters to which we are exposed. Unless we repent and follow the instructions of the prophets of doom.

Muslims fast for Ramadan Hindus fast for Puja Global Warming Alarmists fast for climate

GLOBAL WARMING ALARMISM THE NEW RELIGION

The main reason I'm skeptical of human-caused climate change.. (self.climatekeptics)

Is because of how much the issue has been politicized. 1) Politicians use it as a means of justifying ever increasing taxes and fees. 2) It's already being used by people on the left to designate migrants from third-world countries as "climate change refugees", with the fault lying mainly with westerners of course for their fossil fuel-dependent lifestyles. This narrative will most likely become more common in the future. 3) The planet has become significantly greener over the past few decades and scientists attribute this to increased CO2 in the atmosphere. 4) Nothing in nature is so simplistic as to be black and white, the climate change movement has taken on quasi-religious undertones with fossil fuel-burning depicted as the original sin.

[-] Beatie7 6 points 3 days ago*

I wouldn't say quasi-religious, I'd say religious:

- disagreeers are demons, worthy of death,
- the prophets and priests are the alarmist newscasters, celebrities and professors
- the God is an unchanging Nature (in climate stasis) relieved of mankind (or maybe just whites and asians).

The Role of CO2 and Global Temperature (scottmasonprinceton.ac)

all 11 comments

[-] logicalprogressive [S] 9 points 10 days ago

Religions have a devil who does evil, a hell to be feared and sacrifice gains the sinner entrance to heaven. It's a thousands of years old formula and it works.

It's the same with the Climate Science religion. The devil is CO2, hell is catastrophic global warming and sacrifice giving up oil and redistributing all our wealth. In return heaven is an eternally unchanging climate.

2. PAGANISM, ANIMISM, NATURE WORSHIP

Gaia worship is at the very heart of the **Global Green Agenda**. Sustainable Development, Agenda 21, the Earth Charter, and the Global Warming theory are all part of the Gaians mission to save "Mother Earth" from her human infestation. Gaians have succeeded in uniting the environmental movement, the new age movement, Eastern religions, the United Nations and even the leaders of many Christian denominations behind this vile new form of paganism.

Normal people don't even consider nudity as a way of advancing their case for being the people to run Civilization. There's a totally different plan, that of wearing clothes like a serious person, and using words, reason, and argument. One might wonder, why do so many lefties think nudity expresses some deep truth? Why don't they just use words? No matter how glib they are, or how many academic degrees, somehow a lot of them just want to take off their clothes in public as a final summation of their argument.
They think this is because of some great mysticism; it is for the same reason they love (the myth of) the Noble Savage; it is for the same reason why they relativize all cultures anywhere ever as being equal (or better than) the civilized one they are living in.
These hippy bicyclists are kidding themselves. The real reason they are like this, is they compulsively self-censor their own minds. Thus words will ultimately never work for them.

The climate cult is like the hydra -- cut off a head, and two more grow. The assertions of these so-called "climate scientists" have been debunked countless times, but the media just keeps publishing more of them. Fortunately for us, time is on our side. Reality itself eventually shows that the dire climate alarmism is nonsense.

Fart: futures market?

Yesterday (12/1/2015) YouTube shut our channel down after we uploaded BLUE. There is an effort to censor the truth. Please consider helping us fund our next film on Kickstarter:

"A LANDMARK FILM!"

- Colin Gunn, director of "Wait Till He's Free" and "Indoctrination"

For decades the Green Movement has claimed that Earth is threatened by the activity and even the existence of mankind. Green policies dictate that the noble response is relinquishing our liberties to "save" the planet from peril. This film challenges these Green philosophies, and explores issues like carbon emissions, climate change, over-population, natural resources, and unmasks the UN's Agenda 21 plan. BLUE casts a bold new vision: that through greater freedom we can realize a fuller potential for our fellow man and this beautiful blue planet we call home.

"BLUE will change the anti-human, anti-freedom, anti-science radical GREEN direction we've been heading."

- Curtis Bowers, director of "Agenda: Grinding America Down"

How many of you know warming alarmists that actually mitigate their own emissions?

submitted 11 days ago by bouccrump

[-] programmingguy 9 points 11 days ago*
None. One of the most recent the earth-will-be-destroyed types I have argued with drives and SUV and flies around globe trotting while I've been driving a 35 MPG accent hatchback for 150K miles until it died three months ago. Ofcourse, the only reason I was driving that was for pure frugal and minimalist reasons while the people I argue with live the big life and then talk about how carbon emissions will destroy our planet... dicaprio syndrome.

[-] Florinator 7 points 11 days ago
I had a huge argument with a co-worker a few months ago about climate change. He was outraged that I was a denier. How could I??? Outraged... I politely pointed out that he drives a pickup truck and owns a boat... He was unfazed.

[-] logicalprogressive 7 points 11 days ago
I bicycled to work every day, 9 miles each way, for 8 years before we moved away from California. I didn't rack up 35,000 miles to save the planet, it was just great exercise, fun and a good way to stay fit.

The Environmentalist Left's New Agenda

submitted 1 month ago by logicalprogressive

4 comments · share

sorted by: best

[-] xray606 5 points 1 month ago
A lot of these people need therapy. Simple as that. But unfortunately there's just enough of them, that they co-enable each other and justify each-others nuttiness. Heard a thing on the radio today that this group in Los Angeles wants to get drinking straws banned now. ie: "Bad for the environment" It will always be something.

[-] logicalprogressive [S] 3 points 1 month ago
Instead of learning the lessons of 2016 and speaking directly to the concerns of American workers – particularly in the industrial Midwest – the Environmentalist Left is doubling-down on an extreme, anti-human agenda. This is the alternate reality they have created for themselves for 2017 and beyond: a world free of both fossil fuels and common sense.

Energy and Environment

Cato's energy and environment studies are devoted to explaining how energy markets work and promoting policies that leave questions regarding energy consumption, environmental standards, market structure, and technology to the market rather than government planners. Cato is committed to protecting the environment without sacrificing economic liberty, and believes that those goals are mutually supporting, not mutually exclusive.

I live in California and EVERYTHING is blamed on FakeGlobal Warming. They are even trying to say global warming caused the end of the drought. It's a religion, not a science.

[-] NEVERDOUBTED 4 points 1 day ago
Technically the drought is not over...and the laws put in place to curb water usage are still there. Yes, we have had tons of rain and there is a massive snow pack, but they are citing that the aquifers have not refilled some of which never will, and that the damage from the drought (dead trees...etc.) will take decades to recover. So...depends on who you ask.

Which means, the government wants to keep a tight noose around water use and pricing. They seem to hate green lawns and washing cars and "the drought" was a way for them to go after them.

Mann and Republican Rep. Dana Rohrabacher of California both compared the other side's behavior to the former Soviet Union under Josef Stalin.
Mann first raised the Stalin analogy, then Rohrabacher used the comparison four times after that to talk about Mann and other mainstream climate scientists.
"For scientists to call names to beat someone into submission, that's a Stalinist tactic," Rohrabacher said.

Roger Helmer @RogerHelmerMEP
Of course climate change is real. It's been happening for millions of years.
twitter.com/4billioncandle...

1. SOLAR ACTIVITY, AND OTHER FACTORS

And that brings us to the second point that I try to make—the issue of solar variability. Over the past 150 years, the sun's output has increased quite significantly—to levels not seen in as much as 2,000 years. Many people assume that the sun's output is constant, but in fact, it ebbs and flows on various short- and long-term cycles. And so, not only did solar activity increase sharply during the 20th century, but this same increase in output corresponds quite closely with other warm periods recorded over the past few thousands of years.

Sadly, advocates of man-made climate change essentially discount solar activity as a meaningful contributor to global warming. Their reasoning is that changes in solar irradiance ("brightness") are quite small compared to the overall, observed warming of the 20th century. However, this view overlooks the related—and larger—impacts of solar variability, including atmospheric ionization and cloud formation. And so, when considered together, these associated factors demonstrate a more complete picture of solar variability's relevance.

WHEN THE SOLAR ACTIVITY ENTERS A MAUNDER MINIMUM

WILL LIBERALS BLAME HUMAN ACTIVITY AND TAX US FOR GLOBAL COOLING?

Politifake.org

WRITTEN BY STEVEN CAPOZZOLA, GUEST POST ON AUGUST 4, 2016. POSTED IN LATEST NEWS

How Changes in Solar Activity Can Strongly Influence Our Climate

“Climate change is caused by a combination of factors, including natural cycles, solar variability and human activity. Scientists still disagree about how much each of these factors contributes to overall climate change. What climate alarmists say is sometimes untrue and often exaggerated. We should rely on good science, not science fiction, when we evaluate climate change.”

Two different hypotheses have been proposed to test whether solar radiation can explain climate change. The first relies on the fact that in both the 11 year cycle and, in the longer term, the changes in solar energy are highest at ultraviolet (short) wavelengths. The short wavelength radiation is particularly effective in modifying ozone concentrations in the level of the atmosphere above where typical weather occurs. According to this hypothesis, modifications in the ozone layer could in turn filter down to that level of the atmosphere where our weather is formed, potentially modifying clouds and temperatures there.

The second hypothesis relies on the fact that changes in solar activity also change the flow of small, charged, highly energetic particles (known as galactic cosmic rays) that travel through the atmosphere toward Earth [1, 2]. These particles in turn create more ions (charged atoms or molecules) from air molecules in the atmosphere, and it has been suggested [3] that these ions might modify cloud formation, causing large changes in weather and temperatures below.

Climate Change has always been changing on earth's history. Most of the Earth's history CO2 has over 1000ppm. This is the source for our earth's history for temperature and CO2. http://www.geocraft.com/WVFossils/Carboniferous_climate.html You want to know the main driver for climate change then you have to look at the Sun and the Solar Cycle. Sun is the main driver for climate change.

Study: Advancing glaciers in New Zealand are a sign of 'regional cooling'

submitted 1 month ago by logicalprogressive

all 6 comments

[-] logicalprogressive [S] 4 points 1 month ago*

This is a beauty. This week, Nature Communications published an explanation as to why (at least) 58 New Zealand glaciers grew in the twenty-five years to 2008.

The aberrant behaviour by these naughty glaciers was perfectly explicable though – it was caused by "regional cooling".

The phrase "Regional Cooling" means "Climate models predict global warming but it's actually getting colder".

Dr. Willie Soon: create a 'place in hell' for UN climate science (washingtonexaminer.com)
 submitted 4 days ago by logicalprogressive
 5 comments share

[-] **logicalprogressive** [S] 4 points 4 days ago
 Willie Soon, a rock star among climate change skeptics, pitched the idea of shutting down the United Nations' panel of climate change researchers on Thursday, calling it an "anti-science movement."
 Soon said he would create a "place in hell" to put the U.N.'s climate science and predictions. "There will be a very special place I will create for them. Please go there. It's nonsense. Even a little kid will know this is wrong."

[-] **logicalprogressive** [S] 6 points 3 days ago
 All of this stems on the influence of a single molecule.
 Global warming scientists put a CO2 molecule under a microscope and the two oxygen atoms looked like horns on a carbon atom head to them. CO2 has been demonized ever since.

[-] **Nurizeko** 2 points 3 days ago
 I dunno what's worse, that scientists honestly try and peddle the "CO2 is evil" dogma, or that people who supposedly have a basic education in chemistry at school buy it.

Politics and science are a toxic combination - And the long list of warmists lying and cheating in past years

ardvarcus 3 points 1 month ago

I used to respect scientists, back when I was young and stupid. I would never have believed that the lure of career advancement and dollars, coupled with the counter-threat of humiliation, disgrace, and loss of position, could have induced thousands of so-called climate "scientists" (I won't dignify them with this title) to turn their backs of the scientific method and even on rational evaluation, but the global warming scam proved me wrong, and wrong many times over. The entire world of science is held in thrall by the elite who control the media, which rewards or punishes "scientists" depending on whether they toe the AGW line, or dare to question its dogma. Today I have nothing but contempt for "scientists". They are lying, hypocritical, money-grubbing, social climbing pieces of shit. Every "scientist" who supports the AGW scam deserves to be whipped.

Mitigation Math: Is Climate Activism Futile? (Judith Curry thinks so)

logicalprogressive [S] 1 point 3 days ago

"There is growing evidence of much smaller climate sensitivity to CO2; and even if these drastic emissions reductions occurred, we see little impact on the climate in the 21st century (even if you believe the climate models)."

"It seems rather futile to make token emissions reductions at substantial cost. Deciding that all this is impractical or infeasible seems like a rational response to me."

- Judith Curry

Academia is in the New Dark Age (NAS.org)

15. The usual proposed global warming "solutions"—including carbon taxes, cap-and-trade schemes, renewable energy production quotas, CO2 performance standards for power plants, and moratoria and bans on fossil energy production and trade—are either costly exercises in futility or "cures" worse than the alleged disease.

Global Mean Temperature Back To Where It Was In 1998

ultimis 8 points 1 month ago

Arguably we should see some warming soon from the PDO upswing. Alarmists are holding out for that and will claim all the warming is man made (like they did the last PDO upswing). In the same vein, this "pause" would typically be a PDO cooling phase.

In the end it's going to look like a CO2 forcing of a little under 1 degree Celsius per doubling due to negative feedbacks being larger than positive (unlike what the alarmists have been spouting for years). The fact that the entire subject is so thoroughly corrupted by leftist politics makes this disgusting. But it is no surprise, they have corrupted/destroyed many old respected institutions in order to further their agenda.

logicalprogressive [S] 10 points 1 month ago

Nearly 20 years and no change in temperature. So, tell me again what this global warming thing is about?

When I talk to people who believe the climate change models and the economic models are accurate, I observe another pattern. The people who have the least real-world business experience think the experts probably know how to do this sort of thing.

This I think hits the nail on the head. Go to some pseudo-science sub like r/"skeptical" and what you will see, repeatedly and endlessly, is people who assign 100% credibility to climate models and their related economic models. Not coincidentally, you will also see those very same people in other threads repeatedly professing their support for communism or hardcore socialism (seriously, one of Reddit's most zealous climate activists was there defending Stalin the other day).

In other words, they have no problem with extreme authoritarianism, they believe in a fantasy world where communism works (they just haven't done it right yet is the usual excuse) and none of them have the slightest idea how business and economies actually work.

So when a bunch of leftist academics comes along and says, "we're smarter than everyone else, we made these models and we're all totally doomed unless we implement worldwide socialism" they're all completely disposed to buy it without question because it confirms all their biases.

Notice the article shows presents no data comparing models to reality. Instead the author presents the idea that the climate is just too complex to model with any degree of confidence. Unfortunately, the idea that climate models are way off is an outdated criticism. As of Jan 2017 global average temperature falls well within the uncertainty of the models. Now you can say how the temperature record is faked or that it is all El Nino. Time will be the ultimate test.

[-] extinction6 1 point 14 days ago

"Notice the article shows presents no data comparing models to reality."

Recent Research Shows Climate Models Are Mostly "Black Box" Fudging, Not Real Science (notrickszone.com)
submitted 4 days ago by logicalprogressive
7 comments share

[-] logicalprogressive [S] 15 points 4 days ago

20 years ago climate models were celebrated as a huge breakthrough. Finally we were able to reproduce reality in the computer, which had been becoming ever more powerful and faster. Everyone believed that only minor adjustments were necessary, and the target would be reached. But when the computer-crunched results were finally compared to reality, huge unexplained discrepancies appeared.

Model 'tuning' to get model predictions to fit reality means there's no understanding of the underlying science. It's just massaging parameters without knowing why changing them one way or another works. There's no hypothesis, no theory or comprehension beyond what a mechanic has.

[-] Nurizeko 3 points 3 days ago

20 years ago climate models were celebrated as a huge breakthrough. Finally we were able to reproduce reality in the computer

Which is funny since no climate alarm model so far has ever accurately modelled anything but failed predictions. As reliable as the dawn.

D: Judith Curry speaks out on climate science's fatal flaw – the failure to explore and understand uncertainty
Well, she's got balls (figuratively speaking) because she will now be denounced as a Nazi, a denier, a white supremacist, a racist, a bigot, and a child molester. Other scientists will shun her.
Parenthetically, the behavior of true believers in AGW shows how the dogma of the Roman Church concerning the existence of witchcraft was able to survive for so long. The mechanism used to suppress sceptics of witchcraft in the 16th century was no doubt exactly the same as we see used today to suppress critics of the AGW scenario.

These scientists want to create 'red teams' to challenge climate research, Congress is listening
re recent posts here. eg the one about solar activity -- if you take the total amount of surface warming since around 1890, and subtract the energetic sun & and the effect of slightly increased humidity then ECS goes down to about 1.5C.
not surprisingly, papers have been trending to that ... which is lukewarmism.
1.5C on carbon doubling will not be bad. There will NOT be more droughts; there will NOT be more strong tropical cyclones making landfall. there will NOT be more tornadoes.
pretty much all that will happen is a) sea rise will be around 12" a century instead of 7" a century b) plants will grow better
Trump haters make a comparison between "red teams" and Nazi brown shirts, in 3... 2... 1...

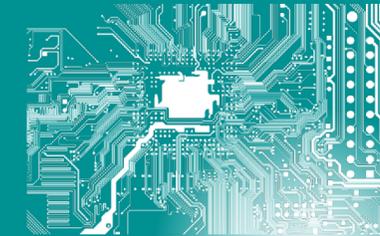

First They Came for the Climate Skeptics

Leaked paper exposes EU countries abuse of climate loophole
EXCLUSIVE/ European Union countries exploited loopholes in United Nations forestry rules to pocket carbon credits worth €600 million and the equivalent of global-warming emissions from 114 million cars.
And they want to put skeptics in prison for not having the same faith as the alarmists. Probably to fill the jails so there is no room for the real criminals for perpetuating this fraud.
TBF Carbon Credits were a scam anyway, a way to monetize 'climate guilt' stoked up by flawed to outright fabricated science.

This greening of the Earth is such a smack in the face to the doomists - I bring it up every chance I get.

[+] logicalprogressive [5] 5 points 10 days ago

Note the amount of greening is greatest along the edges of deserts. Increasing CO₂ decreases the amount of water plants require making them drought tolerant. Here's what the Anza-Borrego desert looks like now

If I were an alien looking down on earth, the only noticeable change that I could detect as a result of rising CO₂ would be a greening of the planet which leading to increased harvests has been undoubtedly a good thing.

CO₂ Coalition

Green plants grow faster with more CO₂. Robust agricultural research shows that more CO₂ will help feed a hungry planet. We can all agree that more food security helps us at home and abroad. Land plants given more CO₂ also become more drought-resistant because higher CO₂ levels allow them to use water more efficiently. More abundant and stronger plants from increased CO₂ are already seen around the world. Satellite images show significant greening of the planet in recent decades, especially near deserts where drought resistance is critical. This remarkable global greening is the result of an increase of CO₂ over the last two hundred years. Still higher CO₂ levels will bring still more benefits to plant growth.

GO GREEN, INCREASE YOUR CO₂ EMISSIONS!

THAT'S RIGHT: CARBON DIOXIDE IS ESSENTIAL FOR MAKING PLANTS GROW, EVEN IN THE DESERT

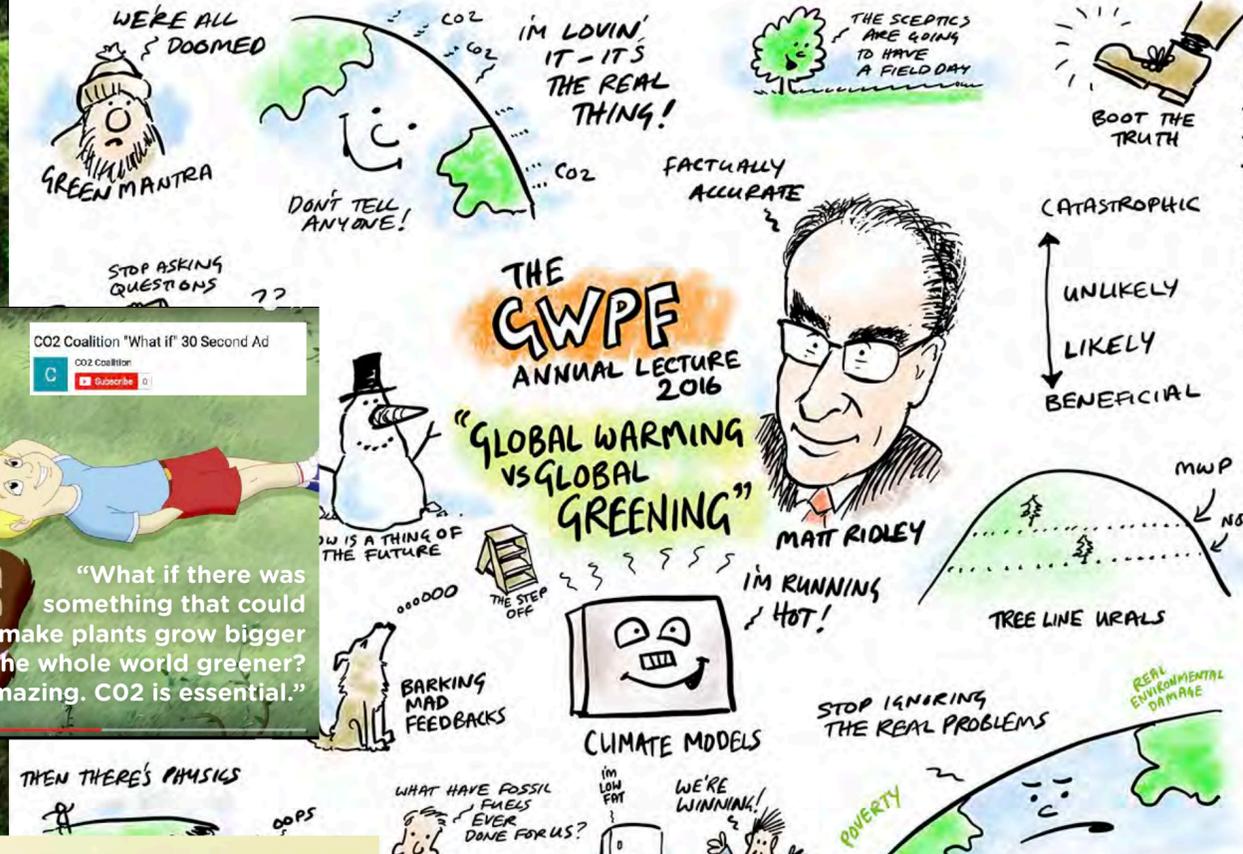

"CO₂ is part of the circle of life. . . We need to ensure that CO₂ levels stay high enough to support healthy plant life."

Global Warming Alarmist NY Times Discovers Cold Is 17 Times Deadlier

Written by William F. Jasper

I assert that warm is good for human health, and that global warming even in the most extreme estimates will not create heat illness or death increases, and certainly no changes that are more important than basic public health measures of vector control, water, nutrition, sewage and housing quality, and the impact of modern medical measures and technology.

Is warm good for health?

The answer is yes, and most people do what they can to mitigate the effects of stressful cold weather. People take the hot springs cure, people vacation in warm places to ease their ills and they move "down south" where the living is easy. As long as you stay in the warm 1st world you will live better and longer. Older Americans move to Phoenix in the winter instead of Cleveland, Buffalo or International Falls. Consider just the risk of falling on the ice in Minneapolis. In Texas we call sensible retirees snow birds.

People die more often during cold winter months. People of all ages get sick in the winter more than summer. I get sick in the winter—same for you and your kids. The WHO proposes we consider warmth as the enemy. Are they goofy or what?

Why would climate change be a threat??

If they were ideologically consistent then they'd kill themselves to stop their impact on the environment. It always seems like it's everyone else who has to give up civilization and live in a cave or just die, never the shouty activists and 'Green' academia.

Personally for me, I see the advancement of human civilization as the greater good. People live better lives, and one day, when we're out colonising space, we'll be turning deserts into gardens, bringing life with us everywhere.

I despise the short-termist small-minded emotional ignorance of those lazy hypocritical type of 'environmentalists'. The Earth has a few million years left of useful life-friendly conditions. I'd like to think it's better...for life and for the human lives that toiled and suffered through history, for us to advance and ensure perhaps endless persistence of life as we know it, rather than humans die off, give nature a small reprieve, and then to die off.

I had a terrarium once. It was sealed and looked great for a while, until it inevitably died off. A very sad sight compared to my garden outside. We owe it to life to advance and spread. If they want a feelings based argument, 'Mother Earth' has been good to us, gave us life. I think as her 'children' we owe it to her to provide her a future.

These people aren't real environmentalists. Their wholesale rejection of nuclear energy is proof enough, but their behaviour, their dogmatic screeching at "thought criminals" who don't buy their articles of faith is also a compelling argument against them.

Bunch of virtue-signalling self-enriching morally bankrupt hacks. It's the Catholic Church which had to shout down and burn heretics, not General Relativity or Darwin's Evolution. The fact that ACW proponents only have their shouting and silencing left should be the end of it, but somehow they persist.

Hilarious: Renewables Won't Work - Even If Climate Claims are True

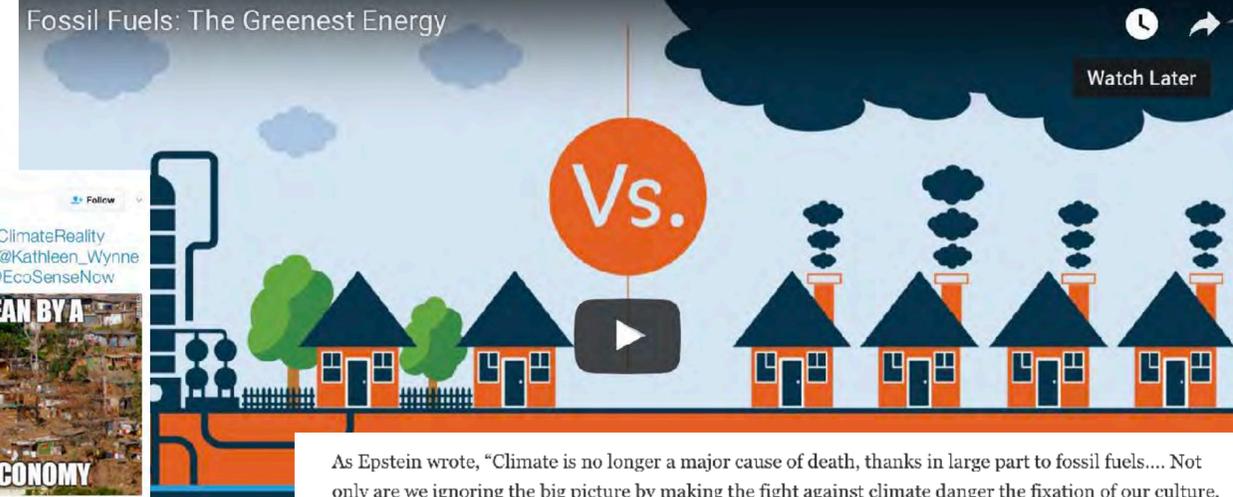

POWER PAST IMPOSSIBLE

Trump presidency 'opens door' to planet-hacking geoengineer experiments

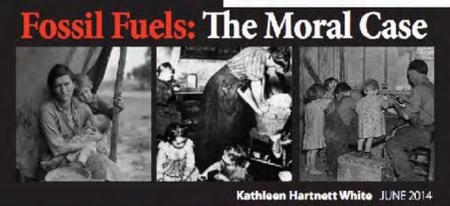

4. THE DARK COLD WORLD OF DRUDGERY

“ Use of the energy in fossil fuels unleashed economic productivity on a scale previously unimaginable. When innovative minds developed a steam engine which could convert the stored heat energy in coal into mechanical energy, the economic limits under which all human societies had formerly existed were blown apart. A life of back-breaking drudgery was no longer the inescapable condition of the overwhelming majority of mankind.

As Epstein wrote, “Climate is no longer a major cause of death, thanks in large part to fossil fuels... Not only are we ignoring the big picture by making the fight against climate danger the fixation of our culture, we are ‘fighting’ climate change by opposing the weapon that has made it dozens of times less dangerous. The popular climate discussion has the issue backward. It looks at man as a destructive force for climate livability, one who makes the climate dangerous because we use fossil fuels. In fact, the truth is the exact opposite; we don’t take a safe climate and make it dangerous; we take a dangerous climate and make it safe.”

Fossil

OPINION | COMMENTARY

Fossil Fuel Free Is No Country for the Poor

A world forced to rely on renewable energy would be cold, dark and haunted by hunger.

Earth Hour: Why not use it to reach out and help a victim of CO2 Alarm? (cliscep.com)

[-] logicalprogressive [S] 7 points 4 days ago
The whole mentality around Earth Hour demonizes electricity. I cannot do that, instead I celebrate it and all that it has provided for humanity. Earth Hour celebrates ignorance, poverty and backwardness. By repudiating the greatest engine of liberation it becomes an hour devoted to anti-humanism.

[-] moirende 6 points 4 days ago
Every year I turn on every light in the house during earth hour. Drives my wife nuts but she understands.

Like the author of the article, I too am celebrating the triumph of science and innovation over backwardness, ignorance and poverty.

[-] Nurizeko 2 points 3 days ago*
It's hard to confront such ingrained CO2 alarmism. I mean if people won't believe simple tangible facts about CO2 that immediately terminally undermines every claim regarding it's role in the climate, what are we to do?

It's like trying to explain that gravity exists to people who have somehow convinced themselves it doesn't. Like how do you even approach that?

Jump up and down? Point out how everything is attached to the ground by an invisible but powerful force?
Climate alarmists have really done a number on people, at this rate I think we'll need cult debuggers to heal people's abused minds.

As for Earth Hour, can't say I've ever heard of it, or did but forgot because I don't care. Like the author I'm not going to play along with the cult's 60-minute hate of technology. If they want clean energy maybe they should all give their life savings to fusion research or something. Getting over the fissionphobia would be a start.

WHAT POWERS THE WORLD?

How much of the world's electricity is still reliant on coal, oil and gas? Flick the switches to see where the world would go dark without fossil fuels, which countries rely the most on nuclear, and who is using entirely renewable power to keep the lights on.

Fossil Fuels Nuclear Renewables

WINTER IS COMING.

BEFORE FOSSIL FUELS. AFTER FOSSIL FUELS.

In my opinion, the time has come to move away from believing that everything that is called “renewable” is helpful to the system. We now have real information on how expensive wind and solar are, when indirect costs are included. Unfortunately, in the real world, high-cost is ultimately a deal killer, because wages don't rise at the same time. We need to understand where we really are, not live in a fairy tale world produced by politicians who would like us to believe that the situation is under control.

It is no 'scientific' justification for any tax. Tax is not a law of nature.
- [+] eintown -1 points 18 days ago
Going to China or India you'll appreciate the need for a tax
- [+] TelosBaculum 4 points 18 days ago
They will curb their pollution in good time. They have to in order to both survive and prosper. This is a temporary problem.

Abundant, affordable energy is a key driver of prosperity. We must unleash resources by removing regulatory barriers and eliminating corporate welfare that favors certain energy sources over others. When energy prices are distorted by government, it disproportionately affects low and middle income families.

20. The potential for disaster is obvious. Globally, poverty is the number one cause of preventable illness and premature death. Developing countries require affordable, scalable energy to lift their peoples out of poverty. Thus, as development expert Deepak Lal observes: "The greatest threat to the alleviation of the structural poverty of the Third World is the continuing campaign by western governments, egged on by some climate scientists and green activists, to curb greenhouse gas emissions, primarily the CO2 from burning fossil fuels."

DANGER: GLOBAL WARMING AHEAD

With a New Preface by the Author
ROY W. SPENCER

On Tuesday, the Obama administration's attempt to seize control of the nation's energy infrastructure faced its latest day in court before the Court of Appeals for the D.C. Circuit. The so-called Clean Power Plan (CPP), which would more accurately be described as the Creating Poverty Plan for its increased energy costs that fall hardest on poor Americans, is the centerpiece of President Obama's global warming agenda. It seeks to impose massive regulatory costs on the nation's economy in order to supposedly prevent less than 0.02 degrees of temperature increase by 2100.

Good eco-intentions are no excuse for extending energy poverty.

Greener on the Other Side - Fossil Fuels: Curing Poverty, Protecting the Planet

"To now despise it [coal-fired power] and come up with a bunch of baseless fears about the future, and how poor people today should sacrifice, so that these theoretical much more wealthy people in the future will have it easier, that is deeply immoral."

—Greener on the Other Side

Thomas M. Doran

WHERE THE GRASS IS GREENER

Biblical Stewardship vs. Climate Alarmism

“ Alarm over a changing climate leading to malign results is in many ways the product of the hunger for stability and direction in a post-Christian world. Humans have a deep, innate need for a transcendent authority. Having rejected the precepts of Christianity, people in the advanced economies of the West are turning to other forms of authority. Putting aside those who cynically exploit the issue for their own gain – from scientists and politicians to UN leaders and green businesses – most activists are deeply committed to a secular, statist, anti-human, earth-centric set of beliefs which drives their claims of a planet in imminent danger from human activity. To them, a planet with fewer people is the

A Call to Action

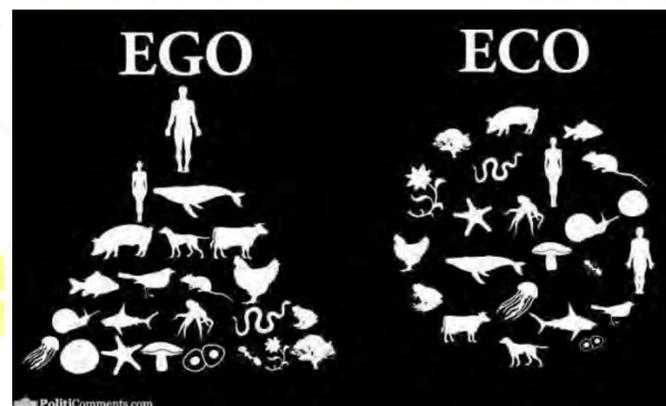

In light of these facts,

1. We call on Christians to practice creation stewardship out of love for God and love for our neighbors—especially the poor.
2. We call on Christian leaders to study the issues and embrace sound scientific, economic, and ethical thinking on creation stewardship, particularly climate change.
3. We call on political leaders to abandon fruitless and harmful policies to control global temperature and instead adopt policies that simultaneously reflect responsible environmental stewardship, make energy and all its benefits more affordable, and so free the poor to rise out of poverty.

In Scripture, man is encouraged to ameliorate human misery, and the progress we've made—building homes that are comfortable to dwell in, producing food and water that's good to eat and drink, making medicines to cure illnesses and chemicals to produce more food—is good and proper, even though these measures are bound to affect the environment. Fossil fuels are not evil, as many would have us believe, as fossil fuels have been, and still are, essential in keeping people fed, healthy, and comfortable in adverse weather. Dominion means that we use natural resources prudently, with an eye to being good stewards, while recognizing that it's morally preferable for human lives to be protected and enhanced than to conserve every last living organism in the biosphere or to leave every natural resource untouched, regardless of what dogmatic environmentalists say.
